Remaining alterations

Priority High (Next version)

-A new message 10XX that indicates change in trafic control status between traffic control - not traffic control.

-A new message 20XX to handle updates of an earlier sent order. It is not to be used as an alteration message of the nodes in the original order. It is only intended to be used in case of adding new nodes to an already sent order.

Priority Low (Later versions)

-How to indicate that the vehicle has the wrong passenger?

-How to indicate that a vehicle not involved with the Client system will be able to
perform an order for the Client at a certain location and at a certain time. (VTRAF and privatepass)
